

PROPOSAL: BEHAVIORAL ECONOMICS OF CHARITABLE FUNDRAISING

Professor Dean Karlan, Department of Economics

<http://karlan.yale.edu/>

Setting up a dataset on development aid and charitable fundraising in the United States, and to help design a field experiment to test different ideas from behavioral economics on why people give to charity and how they choose the charities they choose. Some of the work will be literature review, some will be helping to setup an experiment or two, and some will be data analysis of prior experiments.
