

**PROPOSAL: EXAMINING UNDERINVESTMENT IN AGRICULTURE IN GHANA:
ANALYSIS OF EXPERIMENTAL RESULTS FROM FIELD PROJECT**

Christopher Udry, Professor, Department of Economics

<http://www.econ.yale.edu/faculty1/udry.htm>

Help analyze data from a large field experiment in Ghana on agricultural investment and insurance. This is a multi-year study in which we are learning why farmers do not make investments which many believe to be profitable: is it due to lack of capital, lack of insurance, or perhaps maybe it is due to the investment not actually being profitable. Many data are now in on this project and the work will require extensive Stata programming in order to organize the data, clean the data, analyze the results and help prepare tables and graphs for papers and presentations.
