Econ 326b. Fundamentals of Economic Development

**Day / time:** M/W 9:00 - 10:15 am  
**Course Type:** Undergraduate  
**Course term:** Spring  
**Instructor(s):** Kaivan Munshi

The objective of this course is to examine some of the fundamental forces that shape the process of economic development. This course is divided into three sections: (i) Market Failure: with an analysis of credit, labor, and insurance markets in developing countries. (ii) Social Response: how community networks emerge in response to market failure. We will study the positive and negative consequences of this community involvement for growth and development; in the short-run and the long-run. We will also provide economic foundations for the emergence of social norms and identity, as well as the dynamic inefficiencies that they can generate with economic development. (iii) Biological Response: how epigenetic adaptation to economic conditions in the pre-modern economy can determine nutritional status and health in developing economies. Apart from providing a particular perspective on development, an additional objective of this course will be to demonstrate the use of economic theory in informing empirical research.

Prerequisites: Intermediate Microeconomics (Econ 121), Introductory Econometrics (117, 123, 132, or higher).

**Semester offered:** Spring  
**Undergrad Course Category:** Development  
Public
