Econ 555b. Applied Econometrics II: Microeconomics

Course Type: Graduate  
Course term: Not offered

We will examine various program evaluation methods in econometrics. First half focuses on non-structural methods and the second half focuses on methods based on structural modeling. The lectures presume knowledge of graduate econometrics at the level of Wooldridge’s “Econometric Analysis of Cross Section and Panel Data,” Hayashi’s “Econometrics,” or Amemiya’s “Advanced Econometrics.” It will be useful for participants to have a concrete application in mind in taking the course to examine how he/she will apply the methods presented in the lectures.

Semester offered: Not offered
