Behavioral Finance

CRN: 28921
Course Number: 672
Department (unused): ECON

Description:
Much of modern financial economics works with models in which agents are rational, in that they maximize expected utility and use Bayes’s law to update their beliefs. Behavioral finance is a large and active field that studies models in which some agents are less than fully rational. Such models have two building blocks: limits to arbitrage, which make it difficult for rational traders to undo the dislocations caused by less rational traders; and psychology, which catalogues the kinds of deviations from full rationality we might expect to see. We discuss these two topics and then consider a number of applications: asset pricing (the aggregate stock market and the cross-section of average returns); individual trading behavior; and corporate finance (security issuance, corporate investment, and mergers).

Instructor Name (manual entry): Nicholas Barberis
Instructor(s): Nicholas Barberis
Subject Code (deprecated): ECON
Subject Number (unused): ECON672
Meeting Pattern (deprecated): Th 4.10-7.10p
Term Code: 202001
Session (deprecated): 01
