Models of Operations Research and Management

CRN: 14115  
Course Number: 675  
Department (unused): ECON  

Description:  
The course exposes students to main stochastic modeling methods and solution concepts used to study problems in operations research and management. The first half of the class covers analysis of queuing models such as Markovian queues, networks of queues, and queues with general arrival or service distributions, as well as approximation techniques such as heavy traffic approximation. The second half focuses on control of stochastic processes; it covers finite and infinite-horizon dynamic programming problems, and special classes such as linear quadratic problems, optimal stopping, and multi-armed bandit problems.

Instructor Name (manual entry): Vahideh Manshadi  
Instructor(s): Staff  

Subject Code (deprecated): ECON  
Subject Number (unused): ECON675  
Meeting Pattern (deprecated): T 1.30-4.30  
Term Code: 201903  
Session (deprecated): 01
